Read and Save These Instructions
All Hoods Must Be Installed By A Qualified Installer

INSTALLATION INSTRUCTIONS
CWSH3 WALL MOUNT HOOD

Read All Instructions Thoroughly Before Beginning Installation

WARNING - TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

A. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction. Switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally during installation.

B. When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

C. Ducted fans must always be vented to the outdoors.

D. Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer’s guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.

E. ASHRAE residential ventilation standard 62.2 limits exhaust fans (total) to a maximum of 15 CFM per 100 square feet of occupiable space, unless a back drafting test is performed or make-up air is provided. Consult a local HVAC engineer for make-up air evaluation.

WARNING - TO REDUCE THE RISK OF FIRE, USE ONLY METAL DUCTWORK
Ducting Do’s and Don’ts

General Requirements
• Observe local codes regarding special duct requirements and placement of duct against combustibles.
• Using Vent-A-Hood transitions (back page) will ensure proper efficiency.
• Using Vent-A-Hood roof jacks or wall louvers (back page) will ensure proper efficiency.
• Where possible, seal joints with duct tape.
• The hood must be ducted to the outdoors without restrictions.

Blower Requirements
• The single blower unit (B100) requires 6” round duct or equivalent (28 square inches), and the dual blower unit (B200) requires 8” round duct or equivalent (50 square inches).

<tr>
<td>Dual (B200)</td>
<td>8” round or equivalent</td>
<td>50 sq. in.</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Ducting Requirements
• NEVER reduce the duct size.
• Do not use flexible or corrugated duct. This type of duct will restrict airflow and reduce performance.
• Only use smooth, galvanized, metal duct.
• Make the duct run as short and as straight as possible with as few turns as possible.
• Avoid sharp-angled turns. Instead, use smooth, gradual turns such as adjustable elbows or 45 degree angled turns.
• For duct runs over 20 feet, increase the duct diameter by one inch for every ten feet of duct.
• A 90 degree elbow is equal to 5 feet of duct.

Termination Requirements
• Airflow must not be restricted at the end of the duct run.
• A wall louver or roof jack is required for each duct run.
• Every wall louver or roof jack must include a gravity damper to prevent back drafts.
• Do not use screen wire or spring-loaded doors on wall louvers or roof jacks.
• Do not terminate venting into an attic or chimney.
Installation Details

1) Read all instructions thoroughly before beginning installation. Note: These instructions apply to standard hoods only. Custom hoods may require additional specification consideration.

2) When installing a CWSH3 contemporary wall mount range hood, it is recommended that the bottom edge of the hood be located no more than 24" above the cooking surface for optimum performance.

3) Remove the hood assembly from its packaging and place the back of the hood on the floor or countertop in front of the wall where it will hang.

4) **IF THE HOOD IS TO BE “BACK VENTED”, PROCEED DIRECTLY TO STEP 5.**

Consult the connection diagrams (below) for further details on exhaust outlet placement.

Install the duct from the outside of the home down to the location of the exhaust outlet on the top of the hood. Use duct tape to seal all joints. A complete listing of available Vent-A-Hood ducting materials is provided on the back page of this instruction sheet.

- **Single Blower (B100):** 6" round duct will connect directly to the top of the hood.
- **Dual Blower (B200):** 8" round duct will connect directly to the top of the hood.

**Connection Diagram (30" - 42" Widths)**

- **300 CFM B100 Single Blower 14" Wide Duct Cover**
- **600 CFM B200 Dual Blower 24" Wide Duct Cover**
5) Remove the shipping tape that is securing the E-Z Clean shield inside the hood. Remove the E-Z Clean shield by lightly pulling it toward the front of the hood. Gently close the back draft damper(s) from the top side of the hood. To remove the blower housing, lift the housing levers (one on each side of the housing). The housing should be pulled forward and gently “tipped” to clear the blower wheel(s) and then out of the hood.

6) Remove the three screws retaining the white blower motor. Unplug and remove the motor, taking care not to damage the blower wheel. It is not necessary to remove the blower wheel from the motor.

**Warning:** Make sure power is off and locked at the service disconnecting means on the service panel during installation.

7) Remove the duct cover front panel. The panel is held in place with four snaps at the corners and at least one snap on the left and right. Begin by pulling the panel away at one corner. Work around the duct cover disengaging one snap at a time until all the snaps are loose. Beware of sharp corners and edges. Use caution to prevent bending, scratching or dropping the panel. Position the hood assembly at the location on the wall where it will be installed, flush against the ceiling, and lightly mark the wall with a short, horizontal mark along the bottom edge of the hood.

8) Remove the hood assembly from the wall. On the back side of the hood, measure the distance between the bottom edge of the hood and the top edge of the wood mounting strip. Measure this distance above the horizontal line made in Step 7 and lightly mark the wall with a level, horizontal line. Measure where the center (left to right) of the hood will be and mark the upper, horizontal line on the wall with a short, vertical centerline.

9) Remove the screws next to the blower that retain the wood strip that is recessed in the mounting channel. Remove the wood mounting strip from the back of the hood and place the top edge of the strip on the upper, level horizontal line on the wall. Referencing the vertical centerline from Step 8, place the mounting strip on the wall so it is centered (left to right) in the space where the hood will be located. Using proper hardware, attach the mounting strip to at least two wall studs. Note: drill pilot holes in the wood strip to prevent splitting.

10) Install an appropriate 1/2" UL listed electrical wire clamp through the motor box electrical opening next to the blower outlet. Install electrical wiring from the service panel to the hood location. Consult the connection diagrams (on previous page) for further details on electrical placement. Extend wiring to 30" above the countertop. Electrical connection will occur after the hood is installed on the wall.

* Because the Magic Lung® blower uses centrifugal filtration rather than conventional baffle or mesh filters, the Magic Lung® blower can handle cooking equipment with higher cubic feet per minute (CFM) requirements and can deliver equivalent CFM much more efficiently than other filtration systems. When comparing the Magic Lung® with other blower units made by other manufacturers, use the “Equivalent CFM”.

* Ratings in accordance with the Standards Test Code by the Energy Systems Laboratory of the Texas Engineering Experiment Station.
11) FOR BACK VENTING APPLICATIONS ONLY. IF NOT BACK VENTING, PROCEED DIRECTLY TO STEP 12. Note: Wall studs may interfere with back venting installations. Additional framing may be required. It is necessary to cut a duct access hole in the wall prior to installing the hood.

Hold the hood on the mounting strip by aligning the channel at the top of the back of the hood over the wood mounting strip on the wall. Place the appropriate elbow on top of the hood in line with the hood exhaust collar. On the wall, trace around the elbow. Remove the hood and elbow from the wall. Cut around the outside of the traced line, avoiding wall studs. Install the duct from the outside of the home to the opening in the wall. Use duct tape to seal joints.

12) Hang the hood on the mounting strip by aligning the channel at the top of the back of the hood over the wood mounting strip on the wall. While holding the hood in place, mark locations on the mounting strip through the two mounting holes in the channel next to the blower. Remove the hood and drill 3/32” pilot holes at the center of the marks in the wood strip to prevent splitting.

13) FOR BACK VENTING APPLICATIONS ONLY. IF YOU ARE NOT BACK VENTING, PROCEED DIRECTLY TO STEP 14.

Place the appropriate elbow on the top of the hood. The elbow should be placed with the non-crimped end on the inside the collar of the exhaust outlet. Use duct tape to seal joints. Lift the hood up to the wall and hang the hood on the mounting strip, taking care to properly align the duct connection between the elbow and the duct in the wall. Secure the hood to the mounting strip by installing the screws (previously removed from the strip in Step 9) into the pilot holes drilled in Step 12. Insert the electrical wire from the service panel into the electrical wire clamp on the motor box. Tighten the wire clamp. Caution must be used to avoid scratching the hood or ceiling.

SKIP STEP 14. PROCEED DIRECTLY TO STEP 15.

14) Lift the hood up to the wall and hang the hood on the mounting strip, taking care to properly align the duct connection between the hood and the duct in the ceiling. Secure the hood to the mounting strip by installing the screws (previously removed from the strip in Step 9) into the pilot holes drilled in Step 12. Use duct tape to seal joints. Insert the electrical wire from the service panel into the electrical wire clamp on the motor box. Tighten the wire clamp. Caution must be used to avoid scratching the hood or ceiling.

15) Using appropriate mounting hardware, attach the duct cover to at least one wall stud through the mounting strap in the top of the back of the duct cover.

16) From inside the hood, using UL listed wire nuts, attach the white, “neutral” wire to the white lead, the black, “hot” wire to the black lead, and the ground wire to the green lead inside the motor box.

**Warning:** Do not operate hood without proper ground connection.

17) Plug the motor into the hood and reinstall the blower motor using the three retaining screws that were previously removed in Step 6.

18) Replace the blower housing and the blower shield. Make sure that the damper(s) open and close smoothly.

15) Replace the duct cover front panel by aligning the snaps and pressing each snap into position.

19) Refer to the Owner Maintenance Guide Operating Instructions for proper hood operation. Test all blower and light functions to ensure they are operating properly.
